# Shrek 1 full movie google drive

Photo: Shutterstock "Netflix and chill" was a great concept when the world was open and there was a plethora of other options that took us away from some aspects of life. But now it is safe to say that we finished enjoying the comforts of home, and the pain to go out to a movie (or something, really). If you are looking for a way to enjoy a flick during your safe stay, head to a drive-in. Drive-ins allow you socially distance while enjoying a movie – and you don't have to spend \$100 on a big popcorn and soda. Drive-in cinemas may look like a relics of the past, but in reality there are still about 300... Read more To find a drive-in near you, check DriveInMovie.com, which lists the location of drive-in movies in the United States, Australia and Canada. In the United States, there are over 325 drive-in cinemas at national level. The site also details the location of each drive-in, as well as which are open and which are closed. By clicking each single drive-in location, you can get information on prices for adults and/or child, if outside of food or alcohol is allowed, and how many cars can be parked there at a time. In addition, you can call the theater directly if you have questions about the pandemic or just need more information about what is provided on the DriveInMovie.com website. Originally, most drive-ins would only accept cash payments; due to pandemics, however, they can be offering a non-touch payment option such as CashApp or ApplePay. Interesting drive-in theaters There are many cool drive-in cinema theaters that might be worth traveling for, if you are up to it. Here are some who might interest you. The season of prizes is approaching quickly, which means you should watch a lot of movies – so that you read more.Largest drive-in in the worldThe Ford Drive-In in Dearborn, Michiganof five screens and able to hold over 1,700 cars at a time. You can see all the movies that are showing this week here. Price: Adults (\$11.75), children below(\$4.75), children under 5 years (free) the greenville Drive-In, located in the catskills, has a very natural atmosphere. selling beer and local food, this drive-in shows classic 80s and 90s movies. they also allow indie directors to project and discuss their work. because of the pandemic, they are only allowing 125 cars and only credit and debit cards for payment. price: 1 ticket = \$8, 2 tickets = \$16, 3 tickets = \$20 and 4 + tickets = \$24. Children under 5 are free. view of the beach located less than three miles from imperial beach pier to san diego, the south bay Drive-In is an extremely panoramic area of southern California. also hosts a swap meeting for local vendors to be supported three times a week. price: Adults are \$10 and children 5-9 are \$7. you can see the latest rules to come to drive-in movies during this pandemic here. google drive is an immensely popular cloud storage service that allows you to save various files on the cloud and then access from smartphones, tablets or computers. is preinstalled on most new android phones, and you already have an account if you have ever oato gmail. It is powerful and easy to oate, but if you are new to cloud storage and have never used competitors like dropbox or box, it can be a bit overwhelming. to help, we put together this beginner guide to how to use google drive. feel free to oate jump links to jump to the most relevant part for you. if you don't already have it on your phone, click the download buttons below to download the application for android or ios. download drive for android what is google drive? How does it work? we will not get too technical here, but google drive is google cloud storage solution. allows you to store your media and documents on google servers so you can free up space on your hard drive and access it fromdevice with an internet connection. Before we drive into all the features and show you how to use Google Drive, let's goabout some basic things you need to know. The first is that you need a Google account to use the service. It is free and can be set in a few minutes. The account gives you access to all Google services, including Drive, Gmail, Photos, YouTube, Play Store, and so on. You can access Drive on the web by going to drive.google.com or via the free Android app. You can also view all files via the Drive folder on your PC with Google Drive for Desktop, but you need to download the software first. Read the next: How to configure and use the new Google Backup and Sync tool You can get the software by visiting the Drive website. From here you click the cog settings on the top right, then Get Drive for desktop. Follow the installation instructions, then just launch the program and go through the configuration process, after which you will see a Google Drive icon under the Favorites tab on Windows. Google Drive pricing When it comes to storage, you get 15GB free, which is shared between Drive, Gmail and Photos. This is enough for most people, but you can add more for a monthly or annual subscription fee. This subscription is now called Google One, and gives additional benefits plus just more storage as discounts in the Google Store. We're just focusing on Google Drive prices here, so let's take a look at raw storage. A 100 GB plan will reinstate you \$2 per month, the 200 GB plan costs \$3 per month, and the largest 2TB plan goes for \$10 per month. It is also worth noting that you can save money by paying annually. It works at about two months free of service than subscription month a month. Read also: Google One against competition: Dropbox, OneDrive, iCloud, and more One important thing to keep in mind is that Google Photo storage will soon count towards your drive limit. If you planuse photos (and most Android users do), this can be enough reason to upgrade to a paid plan. You also get some extras, such as the ability to sharestorage capacity with family members. Types of supported files Storage is the main concern for most cloud storage solutions, but file type restrictions can also be significant for many users. Luckily, Google Drive supports a ton of file types including .jpeg, .png, .gif, mpeg4, .mov, and .avi — see the full list here. There are also file size limits in place, but will not cause problems for most users: Documents: Up to 1,022 million characters. If you convert a text document in Google Docs format, it can be up to 50 MB. Calculation sheets: Up to two million cells for spreadsheets created or converted into Google Sheets. Presentations: Up to 100MB for presentations converted to Google Slides. All other files: Up to 5TB. This is for our primer on what Google Drive is and some basic things you should know before you start. Now that we got this off the road, let's take a look at how to use Google Drive. How to upload and download Google Drive files In order to access files on Google Drive, you must first upload them via web, PC or mobile client. First, we will talk about the web client, where there are two ways to upload files to Drive. The first is the drag and drop method: select a file you want to upload from your PC, drag it to Drive in a browser window and release it. This works for both individual files and folders. There will be a small window in the bottom right showing upload progress. The second option is to click the New button located in the top left corner of the site and select Charge file or Charge folder (picture above). Then choose the files or folders you want to upload, click Open or Charge, and you are good to go. An even easier way to upload to the cloud serveris to take advantage of Google Drive for Desktop. Just drag the documents you want to upload and release them into the Drive folder. It basically works the same as transferring files from one folder to another on your ownvein if it may require a little for files to sync. uploading files from the mobile device is just as easy. Open the drive app, tap the + icon in the bottom right corner and select the file you want to send to the cloud. You can also quickly upload files by opening them, touching the button share, then save to drive. downloading files from google drive is also fast and easy on any device with an internet connection. if you are oando google drive for desktop, anything uploaded can be copied to any other folder on your computer like any other file. You can also download files from the web client by right-clicking the mooe and clicking on download. this works for both individual files and entire folders. on mobile devices can be more convenient to leave files in the cloud and open them as soon as you need them, but there are some situations where you need to find the google drive download button. all you have to do is find the file in the app, tap the three points right, then download, and you are good to go. You can arrange the files in drive the same way that you would on your pc. You can leave them all in a place (my drive by default) or put them in different folders. to create a folder in the web client, click the new button and then select folder. You can also right-click the mooe in the drive folder on your computer and create a new folder as you normally would on windows. on mobile, tap the blue + button and select folder, as shown in the screenshots below. to move files to a folder on the web, you just have to use the drag and drop method for the web client and the drive folder. this also works on mobile, but in my experience, it is faster if you touch the More actions icon (three vertical points) next to a file,the Move option, and then choose the new location for the file. Since storage space is at a cloud award, it is important to know how to delete drive files to erase space. The easiest option on the web is to select a file or folderpress the delete key on the keyboard. This works for both the web client and the Drive folder. To delete a drive document from the mobile device, tap the More actions icon next to the file (three vertical points) and select Remove. How to share files on Google DriveOne of the best things on Drive is the ability to share files with others. These can be individual documents and folders. To share a Google Drive file or folder, select and click the Shared Get Link icon, then copy and share the link with the people you want. Note that you have some control over what people can do with your link. The default Restricted mode means that only people who explicitly add can see the file. You can change this so that anyone with the link can see it. For Google Docs and Sheets, you can also choose between viewing and editing permissions. The process is similar for mobile devices. Tap the Other actions icon (three vertical points) next to a file and activate the Link sharing option. The link will be copied automatically, so you can go ahead and paste it into a messaging app and send it to a friend. Alternatively, you can tap Add people to send the link to an email address. Drive is connected with Google's productivity suite office which includes Google Docs, Sheets and Slides, which rival Microsoft Word, Excel and PowerPoint. Although these three services have their own dedicated website, each document you create is automatically saved in Drive. Drive also supports other Google services such as Google Forms, Google Drawings, and more. You can create a document directly from the Drive web interface or the mobile app, which will then take you to the Google Doc page. How exactly? Click the New blue button in the top left corner of theand then select Google Docs, Google Sheets, or Google Slides. On mobile, tap the blue + icon and select one of the three options mentioned in the previous sentence. No matter which option you choose, you will always beto access all documents created by your PC, mobile device, as well as the Drive folder on your computer. Google Drive also integrates with many third-party applications. These include: DocHub (PDF drawing) Pixlr Express (photo editor) Draw.io (diagrams) and many others A third-party app that works with Google Drive is WhatsApp, where you can store previous messages on the cloud service. In even better news, WhatsApp has made a change that allows people to store messages on Google Drive without having them count towards their storage limits. You can check the full list through the web interface: click the New button and select More below from Connect multiple applications. When you see something you like, click the Connect button to integrate it with Drive. Using the integration of Gmail Drive Edgar Cervantes / Android Authority One of the best and most useful integrations is between Gmail and Drive. In fact, the unofficial support for using Gmail for storage predates Google Drive as a service. Fans created a program called Gmail Drive that allowed you to use Gmail as a storage medium. Obviously, once Google Drive and Drive to Desktop have been released Gmail Drive is no longer necessary and is no longer supported. Read also: How to configure a Gmail account in less than 2 minutes To share a Drive file with Gmail, start composing a message and click the Drive icon at the bottom of the screen. You can then browse the file and share it. On your mobile phone, click the Attach icon (paper clip) at the top of the screen, and then enter from Drive. This is also an easy way to share large files, which are shared as links rather than attachments. It is also easy to save Gmail files to drive. Just mouse over the image or other media files andClick the Drive icon at the bottom right. On mobile, you need to press the image for a long time, then tap View image. Tap the Other options (three points) icon on the top right, then Save to drive. It is worth noting that the files on the Count Gmail towards the same storage limit as ason drive (just like photos on google photos.) so you don't really save any space in this way, you are, however, making them easier to search in the drive interface on web, mobile and desktop clients. how to use google drive offline having online files is great to access them from multiple devices, but it can also mean that you will not be able to see or edit without an internet connection. Fortunately, this is not the case with google drive. the service has an offline mode, which allows you to access files while you are not connected to the internet. You can view and edit files including google docs, sheets and slides, with all synchronized changes automatically when an internet connection is established again. you have to activate offline access individually for each device. on the computer, open the settings menu and activate the offline mode (picture above.) also, make sure to download the offline chrome extension of google docs. Once done, you can visit the drive website to view or edit files. but keep in mind that you need to use the chrome browser for this job. of course, you can also open files via the drive folder on your computer, which then will open in chrome. things are a little different on mobile devices. you need to open the drive app, tap the Multiple Actions icon (three vertical points) next to a file, then select available offline. Alternatively, you can long press on a file and then select others and follow the same procedure to enable offline mode for multiple files simultaneously. Time.
