With Disney+ Android, you can get the best of online movies, online TV shows, Star Wars content, National Geographic, Pixar movies, Marvel movies, and other Disney classics right on your fingertips. The ad-free service proves to be less expensive than the competition, and the familiar layout ensures ease-of-use. While Disney+ could do well with some more content in the catalog, it's still a worthy candidate for a streaming service on your Android device. With Disney+, you can watch your favorite TV shows and movies in HDR and 4K UHD from anywhere you want. In fact, you can even watch your favorite content offline, once it has been downloaded on your device. From Disney-sponsored documentaries to originals, cartoons, TV series, and movie releases, you can stream loads of content on your Android device. While the app is famous for a wide range of content, there's still more variety on popular services like Amazon Prime Video and Netflix. In the coming months, Disney will have to ramp up the additions to the catalog. Does Disney+ offer exclusive content? While Disney+ needs to add new content to compete with streaming giants, it's not really a valid complaint. In the beginning stages, the app has focused on several Disney titles, exclusive to the Android app. For instance, you can enjoy The Mandalorian, Snow White, Pixar movies, Simpsons, and other popular shows and movies. If you've been a fan of Disney's content, you'll love the offerings, and would want to stay tuned for hours in one go. It's worth mentioning that Disney owns both Star Wars and Marvel, and as such, it's the only streaming service with old and new content from these franchises. With Disney+ Android, you can watch your favorite Marvel and Star Wars movies anytime, from anywhere. Apart from blockbuster Star Wars and Marvel hits, you can also enjoy Falcon, WandaVision, Loki, or the Winter Soldier. With Disney+ Android, you get a familiar layout of streaming services like Hulu and HBO NOW. Therefore, the app is easy to use, with big banners on the top of the home page depicting newly added content, and well-defined categories to help you browse through a range of content. With the streaming service, Disney has focused on exclusive content to lure in more customers. For many years, it has enjoyed tremendous success due to a loyal fanbase. With Disney+, the company aims to tap into this fanbase, while adding new content on a regular basis. Most importantly, the availability of ESPN, National Geographic, and other popular platforms makes Disney+ a good choice. Is Disney+ a good choice for Android? It's true that the app suffers from a few technical problems, but Disney has been working hard to fix issues. Currently, there are some minor issues related to integration with Chromecast. For instance, when one episode ends, the next one doesn't begin automatically. Similarly, a paused movie might not pick up from where you left it. On the Android app, the brightness setting fluctuates and makes the nighttime scenes seem darker than usual. These issues are quite apparent if you've already been using other streaming services like Netflix or Amazon Prime Video. However, these problems aren't major, and Disney will soon be able to resolve them for Android. Can you use Disney+ on other platforms? Like most streaming services, Disney+ is available on a wide range of platforms and devices, including tablet devices, iOS devices, Android TVs, Android smartphones, PC web browsers, Chromebooks, Chromecasts, Amazon Fire TVs, Roku devices, LG and Samsung Smart TVs, Xbox One, and PlayStation 4. If you've been a fan of Disney, Star Wars, Marvel, or Pixar, Disney+ Android will be an excellent choice in terms of quality. Compared to other streaming and entertainment services, the app does have less content, but wins the race with exclusive Disney shows and movies. Additionally, it's less expensive than the competition, and gives more value for your money. Should you download it? Yes, you should! Disney+ is an excellent choice for Android devices. While it's a relatively new service, the company aims to make constant improvements in the coming months. From here on, the app's versions will only get better with more content, downloads, and features. FUTBIN is a free supplemental app that helps players manage various aspects of their FIFA Ultimate Team gaming setup. Its extensive interface lets you explore the player database, play the draft simulator, access the squad builder, and get all the relevant statistics for more efficient gameplay. FUT is a massively popular game, with many supplemental apps coming out to facilitate players' experiences. While Futwiz and Futview are reliable alternatives, especially for prices and stats, FUTBIN is the crowning jewel of such programs. It combines all information in a single application, making all the data more digestible. However, if you're a new player, the sheer number of features can overwhelm you at first. While it's well-designed, FUTBIN does have a steep learning curve. A logical structure. The structure is critical for understanding FUTBIN and using it effectively. The app consists of menus upon menus, leading you to its various sections. The Start menu displays your most recent plays, your most-used sections, and player browsing options. The primary submenu deals with players. Here, you can survey the market with useful, real-time diagrams, favorite players, and a trading section. The search bar lets you browse players by various characteristics. You can also take surveys, give feedback to the FIFA community, and read through other members' experiences with every football player available. Free vs. paid. You can use this app for free, but there are also four price tier options. Most notably, the subscription removes ads from the app, which significantly improves the user experience. Moreover, higher tiers enable various useful notifications, such as player, SBC and squad prices, market value, and headliners. FUTBIN is an excellent solution for people looking to facilitate their FUT gameplay. It's well-thought-out and can be super-beneficial for players juggling vast amounts of information. Should you download it? Yes, if you're a big FUT 21 fan. While the learning curve can be overwhelming for new players, it's helpful to have all information in one place. Highs Packed with options and data. Grants access to FIFA community. Well-organized into submenus. The next update for Apple phones, iOS 13.5, is here - and the latest iPhone 11 Pro, iPhone 11 Pro Max and iPhone 11 aren't the only ones that will benefit from the operating system upgrade. Here's how to get iOS 13 on your iPhone. Not all iPhones will be able to download the update - sadly, anything older than the iPhone 6S or later, iPad Air 2 or later, the new iPad mini 4 and iPhone SE can't upgrade to iOS 13. And your newer iPad won't get it either, and that's because it'll get a slightly reworked version of iPadOS software. iOS 13.5 is expected to be one of the last updates of this generation as it's likely Apple will unveil iOS 14 on June 22 at WWDC 2020. But if your iPhone is compatible with iOS 13.5, scroll below for a step-by-step list to update your device to the latest software. 1. Before getting iOS 13.5, backup your iPhone. If you want to download iOS 13.5, we recommend you back up your iPhone first - just in case. That way, you can restore your phone's settings, apps, and data to normal (that is, on a stable version of iOS) should something go wrong. So before downloading iOS 13.5, head over to our supreme guide on how to back up your iPhone. 2. Download from your Settings page. It's very easy to download to iOS 13.5, but you'll need to be connected to Wi-Fi to upgrade. Head to Settings > General > Software Update. Hit the button to update to iOS 13, and you'll start the process. It's a bit extensive, and depending on your connection, could take minutes or hours - and it might be longer if you're upgrading at a time when everyone is trying to upgrade to the new OS version. The phone will need to download the update first, then prepare your device. Stay strong. If you have Automatic Updates turned on, the update should auto-install anyway according to Apple protocol - i.e., overnight if your device is plugged in. Don't have a compatible scan with iOS 13.5? These are the best deals on the most recent iPhones. List of Partners (vendors) According to a published report on Wednesday, developers are making 5 times the money writing for iOS than Android on a per download basis. The data shows that Android is lagging badly behind its chief rival when it comes to in-app purchases, and in the aforementioned developer revenue per download metric. In mobile ad revenue, including ads and developer fees, the two platforms are much closer. A report on Tuesday said that ads on iOS are producing an 1800% better return than the same ads running on Android. Advertisers investing in Android actually had, on average, a 10% loss. Another report from analytical firm Flurry shows that iPhone users spend 19 cents on average for each app downloaded, a figure that reaches just 6 cents for Android users. Developers focusing on iOS make more money per download than their Android counterparts. source: Business Insider. SUBSCRIBE TO OUR NEWSLETTER!
